

Validating Your Site

Check your code!

Why validate?

- **Browsers are the helicopter parents of programming**

→ 모든 browser가 error를 자동 fix 해주지 X

- **As your pages become more complex “hidden” areas can be devastating**

→ code가 복잡해질수록 숨겨진 error는 큰 영향

Three approaches

- **Validate by URI** (URL)
- **Validate by Filename**
- **Validate by Direct Input**

Don't freak out!

- **Errors propagate**, so always **start at the top**
- Search for solutions online and in forums

Accessibility Validation

- You can use **wave.webaim.org** to validate accessibility
- Only works on hosted pages

Review

- **Validated sites are more robust and more accessible**
