

Useful Tags

**Tags for blocks of code and
simple snippets**

Choosing Your tags

- **Generic:** `<p>`, `<div>`
- **Semantic:** `<header>`, `<nav>`, `<footer>`,
`<figure>`

Block Tags

- Containers

- `<article>`, `<aside>`, `<section>`, `<main>`, ...

- `<hr>` ↪ 줄을 긋 → 세지는 것

- `<address>` ↪ 주소대로 주소

- `<blockquote>` - has `cite` attribute ↪ 인용 (원색이진 소문자)

- `<details>` with `<summary>`

Inline tags

- **** was the original inline tag for plain text
- **<cite>** ~ 사이트
- **<abbr>** ~ 약어의 full 표시
- **<time>** ~ 시간 표시
- **<code>**
- **<sub>** and **<sup>**

Tags that need “more”

- `<button>`
- `<meter>`
- `<progress>`
- `<iframe>` – often used to embed documents
- `<bdo>` attribute `dir` (ltr or rtl)
- `<map>` with `<area>` -- creates “clickable element in image” but needs JavaScript

Review

- Use the most specific tag possible
- Sometimes tags “don’t work”
 - Run your code through a **validator**, you may have a syntax error
 - Run your code in **multiple browsers** (good idea even if your code looks good)
